

JASON E. THOMAS

Front-End Developer | JavaScript • React • TypeScript

Middleburg / Jacksonville, Florida

JEThomas1130@gmail.com

GitHub: github.com/jthomas380

Portfolio: jet380.com

PROFESSIONAL SUMMARY

Front-End Developer and U.S. Navy veteran building responsive, user-focused web applications with JavaScript, React, TypeScript, HTML, and CSS. Experienced in developing interactive interfaces, integrating third-party APIs, managing application state, validating user input, performing real-time calculations, and creating responsive experiences for desktop and mobile devices.

Strong problem-solving background developed through electrical engineering, embedded systems, military service, and hands-on software development. Comfortable taking a project from concept through development, testing, deployment, and ongoing improvement.

TECHNICAL SKILLS

Front-End: JavaScript, React, TypeScript, HTML5, CSS3

Development: Responsive Web Design, DOM Manipulation, Application State, Form Validation, REST API Integration, Asynchronous JavaScript

JavaScript: Fetch API, Promises, Async Data Handling, Dynamic Rendering, Event Handling

Tools & Platforms: Git, GitHub, VS Code, Hostinger, Firebase

Additional: C, C++, Embedded Systems, Responsive UI Design, Accessibility Fundamentals

SELECTED PROJECTS

Blacktop Mobile Detailing

HTML • CSS • JavaScript • Responsive Web Design

Developed a responsive mobile-detailing website with an interactive service-booking workflow. Users can select service packages, vehicle types, add-on services, appointment dates, and available times while pricing updates dynamically.

Built JavaScript-driven application state, real-time pricing calculations, form validation, responsive navigation, appointment scheduling, and a simulated deposit checkout experience.

Mortgage Lender

HTML • CSS • JavaScript • Responsive Web Design

Built an interactive mortgage lending website featuring a mortgage-payment calculator and guided multi-step prequalification workflow.

Developed calculations for principal and interest, property taxes, homeowners insurance, down-payment percentages, and estimated monthly payments. Implemented dynamic form state, validation, appointment scheduling, modal interactions, and responsive navigation.

ReelFinder Movie Database

HTML • CSS • JavaScript • REST API • OMDb API

Developed a responsive movie-discovery application that retrieves and displays live movie data from the OMDb API.

Implemented asynchronous API requests using Fetch and Promises, combined data from multiple requests, dynamically rendered movie results, and added sorting by IMDb rating, title, and release year. Built loading states, error handling, responsive carousel navigation, and application state management.

DEVELOPMENT EXPERIENCE

Independent Front-End Developer

2018 – Present

Design and develop responsive web applications from concept through deployment. Build user interfaces, interactive workflows, calculations, API integrations, forms, and reusable front-end functionality using modern JavaScript development practices.

Maintain projects with Git and GitHub, deploy production websites, troubleshoot browser and responsive-layout issues, and continuously expand development experience with React and TypeScript.

EDUCATION

Bachelor of Science — Electrical Engineering & Communication Technologies

ITT Technical Institute | 2016

ADDITIONAL EXPERIENCE

U.S. Navy Veteran — Aviation Electrician's Mate

United States Navy | 1999 – 2012

Technical military experience working with electrical, electronic, troubleshooting, maintenance, and complex technical systems in structured operational environments.
